SHIVAM SINGH

Full Stack Engineer — Node.js | RESTful APIs | MongoDB & SQL

Mumbai, 401208, India | +91-7348059153 | thisisshivam1991@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Full Stack Engineer building end-to-end system features — from React.js/Next.js interfaces to Node.js/NestJS backend services — for a production LMS platform. Proficient in Node.js with asynchronous, event-driven code across batch-processing and PDF-generation pipelines (Puppeteer, Archiver). Strong in RESTful API design and both NoSQL (MongoDB aggregation, schema design) and SQL (MySQL) integration. Uses Git-based collaborative workflows (GitHub, Bitbucket, Jira) within Agile, cross-functional teams, writing clean, maintainable code and improving existing systems for performance and scalability.

TECHNICAL SKILLS

Backend (Node.js): Node.js, Express.js, NestJS, Async Programming, Event-Driven Pipelines, RESTful API Design

Databases (SQL & NoSQL): MongoDB (Aggregation Pipelines, Mongoose, Schema Design), PostgreSQL

Frontend: React.js, Next.js, Redux, Material UI, Bootstrap, HTML5, CSS3, Reusable Component Architecture

Version Control & Workflow: Git, GitHub, Bitbucket, Jira, Agile/Sprint-Based Cross-Functional Teams

Languages: JavaScript(ES6+), TypeScript, Java

Security & Data Protection: JWT, Bcrypt, Role-Based Access Control (RBAC), Secure Data Handling, DTO/Class-Validator Validation

Third-Party Integrations: GCP Cloud Storage, SendGrid, Puppeteer (PDF Generation), Stripe

File Processing: DOCX Parsing/Generation, Excel Bulk Upload, JSON/CSV Parsing, ZIP Streaming (Archiver)

Cloud & AI Tools: AWS — S3, EBS, RDS, DynamoDB; AWS Cloud Practitioner (fundamentals), Claude Code, ChatGPT, Gemini

WORK EXPERIENCE

Full Stack Developer — Hubblehox, Mumbai *Jan 2025 – Present*

- Developed and maintained server-side components for the LP (Lesson Plan) Bulk Upload/Download pipeline on a NestJS backend, integrated with a React/Next.js frontend (upload dialogs, status UI, bulk download); restructured processor/batch-tracker/resource-upload services with duplicate-LP detection and validation, collaborating with cross-functional team members on service design.
- Designed and built a DOCX parsing & generation service — a dedicated extractor converting uploaded Word lesson plans into structured HTML/JSON, plus a DOCX builder (docx npm) that regenerates formatted, re-uploadable lesson plans with embedded images.
- Built an asynchronous, event-driven Report Card generation service (Puppeteer + Archiver) rendering assessment data into styled, paginated PDFs via a reused headless-Chromium instance, batching multiple students into a single ZIP with per-student failure isolation.
- Improved MongoDB aggregation pipelines for batch/teacher-workload listings, course-teacher mapping, and filter/pagination across assignments, resources, and courses — enhancing query performance and scalability.
- Integrated GCP Cloud Storage via asynchronous batch transfer (100 files/run) with failed-file tracking, and migrated embedded Base64 images to Cloud Storage URLs to shrink payload size.
- Built RESTful backend services and React/Material UI admin screens for teacher management — creation, bulk upload, and course-batch mapping — integrating SendGrid for event-driven onboarding, raise-ticket, and password-reset email workflows.
- Implemented role-based access control and permission-gated UI — conditional visibility of upload, download, instructional, and content-protection controls tied to backend permission logic and application state, following secure coding best practices.

Associate Developer — BVG India, Mumbai *Sep 2024 – Jan 2025*

- Built responsive dashboards and reporting interfaces using React.js and MySQL as part of a cross-functional Agile team, translating stakeholder requirements into functional, maintainable UI.
- Developed internal tools and automated operational workflows using backend scripting and data integration, improving cross-department efficiency and system reliability.

KEY PROJECTS

Cab Booking System | *MERN, Redux, JWT, REST APIs, Stripe* *Jan 2024 – Jun 2024*

- Built a scalable full-stack cab booking platform with React.js, Node.js/Express.js, and MongoDB, using Redux for centralized state management across booking and trip workflows.
- Designed RESTful APIs with JWT-based role authentication and Stripe payment integration, delivering dedicated dashboards for trip and user management.

E-Commerce Platform | *MERN, Redis, JWT, Bcrypt* *Aug 2024 – Jan 2025*

- Built a secure full-stack e-commerce platform with JWT authentication, Bcrypt password hashing, and Role-Based Access Control (RBAC) for protected API routes.
- Implemented Redis caching for frequently accessed endpoints, reducing API response time by 40% and improving throughput under load.

EDUCATION

Master of Computer Application (MCA) — Tezpur University, Assam 2024 | CGPA: 7.98 / 10

Bachelor of Computer Application (BCA) — Mahatma Gandhi Kashi Vidyapeeth University, Varanasi 2022 | 74.9%
